Professional Summary

Full-stack software engineer with 6+ years of experience building enterprise applications, cloud services, and AI-powered products. Experienced in React, TypeScript, C#/.NET, and Azure, with hands-on experience developing healthcare AI applications and integrating LLMs into clinical workflows. Proficient in AI-assisted software engineering, including agentic coding workflows, automation, and LLM tool integration.

Professional Experience

Microsoft **Aug 2023 – Present**
Software Engineer *Remote*

- Developed core React experiences for a greenfield healthcare AI application, including conversational chat, integrated telephony, and usage analytics. Integrated with Azure OpenAI, Microsoft Teams, and clinical systems to support AI-assisted clinical workflows and documentation.
- Designed and implemented persistent conversation management, including thread organization and folder-based association with EHR-derived patient lists, maintaining relevant clinical context across LLM interactions.
- Independently designed and implemented an agentic performance testing workflow using GitHub Copilot custom skills and instructions. Integrated Azure Load Testing APIs, service logs, and Cosmos DB metrics to automate test execution and generate consolidated performance analysis reports through natural language prompts.
- Designed and integrated automated performance regression testing into CI/CD pipelines using Azure Load Testing, establishing performance baselines and deployment gates to identify performance degradation before release.
- Developed .NET APIs and Azure-backed services, including embedded Power BI report configuration, bulk user imports through Azure Service Bus, and authorization integration between legacy systems and Microsoft Entra ID.
- Took ownership of LogAnalyzer, an internal production diagnostics tool, following the departure of its original architect. Maintained and enhanced the application, implemented security and usability improvements, and independently deployed a regional instance in Switzerland to support a new Nuance Management Server environment.
- Integrated AI coding agents into daily development workflows, using GitHub Copilot for implementation, debugging, refactoring, and testing. Experienced in directing agentic workflows, providing technical context, and reviewing generated code.
- Participate in production on-call rotation, investigating and resolving incidents, monitoring service health, and coordinating with partner engineering teams.

Nuance Communications **Jun 2020 – Aug 2023**
Software Engineer *Remote*

- Contributed to a major modernization of the Nuance administration portal, migrating a legacy JavaScript application to a TypeScript and React-based architecture and developing reusable frontend components.
- Developed a shared frontend component library and interactive documentation adopted by adjacent engineering teams to improve consistency and accelerate UI development.
- Improved engineering infrastructure across multiple repositories through CI/CD automation, functional testing, vulnerability scanning, and automated dependency management.

Technical Skills

Languages: C#, TypeScript, JavaScript, Python, Java, Bash
Frontend: React, Zustand, React Query, Fluent UI, Vite, Webpack
Backend: .NET, ASP.NET Core, Node.js, REST APIs
Cloud: Azure, Azure OpenAI, Cosmos DB, App Service, Functions, Service Bus, Blob Storage, Communication Services, Load Testing
AI Development: GitHub Copilot, AI Coding Agents, Agentic Workflows, LLM Tool Integration
Testing: Jest, Playwright, Unit and Integration Testing

Education

Worcester Polytechnic Institute **May 2020**
Bachelor of Science in Computer Science, with Distinction *GPA: 3.34*
